

RB 1700

RB 1800

Commercial & Industrial Regulator

The RB 1700 / RB 1800 series of regulators is designed for commercial applications, appliance pressure regulation, secondary regulation of plant distribution piping, and all installations with continuous consumption and rapid flow rate variations, such as burners, industrial ovens, boilers, etc.

KEY BENEFITS

- » High flow accuracy
- » Easy maintenance
- » Rugged construction for durability
- » Balanced valve design eliminates inlet pressure effect
- » EN 334 compliant

DESCRIPTION

The RB 1700 or RB 1800 regulator is a direct-acting, spring-loaded regulator with an optional integrated safety shut-off device. Its balanced valve design ensures constant outlet pressure when the upstream pressure varies.

An optional built-in shut-off valve offers protection against overpressure and over-and-under-pressure. Its bypass system eases the shut-off valve relatching.

Technical Features

Inlet pressure	19 bar	
Outlet pressure	RB 1700	0.12 bar - 2.5 bar
	RB 1800	19 mbar - 2.5 bar
Accuracy & lock-up pressure	Up to AC5 / up to SG10	
Operating temperature	-20°C to +60°C	
Ambient temperature	-30°C to +60°C (body material)	
Acceptable gases	Natural gas, town gas, propane, butane, air, nitrogen or any non-corrosive gas	
Safety devices	Optional built-in safety shut-off valve: over-pressure shut-off (OPSO) and under-pressure shut-off (UPSO) Optional creep relief valve (only on RB 1800)	
Options	Monitor version	

Sizes & Connections

Body sizes	1" - 1½"	
Connections	Parallel thread ISO 7 or ISO 228, NPT	
	Flanged DN 25 - PN 20 or 25	⇒ RB 1700
	Flanged DN 40 or 50 - PN 20 or 25	⇒ RB 1800

Materials

Body	Spheroidal graphite cast iron ISO 1083 gr 500-7
Head	Pressed steel UNI EN 10025
Internal parts	Stainless steel and brass
Seals	Nitrile rubber
Diaphragm	Synthetic rubber with fabric reinforcement

RB 1700 / RB 1800
Operational Diagram

Accuracy class (AC), lock-up pressure class (SG) and lock-up pressure zone:

- » RB 181x up to AC 5 / SG 10
- » RB 172x / RB 182x up to AC 5 / SG 10
- » RB 173x / RB 183x up to AC 10 / SG 20

The typical lock-up pressure zone is:

$$\frac{Q_{min, Pe}}{Q_{max, Pe}} = \frac{2.5}{100}$$

SAFETY SHUT-OFF VALVE
Operational Diagram

The RB 1700 / RB 1800 series of regulators can be fitted with safety shut-off valve for overpressure (OPSO) or combined under-and-over pressure (UPS/O) protection.

The SSV trip pressure can easily be adjusted independently of the regulator set point.

The closing plug of the SSV controller is used as pulling tool to relatch the valve.

A built-in bypass, for balancing pressure before relatching the safety shut-off valve, is operated by pulling the valve stem.

Accuracy class (AG)

- » SSV Ø 60 0.3 - 4 bar AG 10
- » SSV Ø 120 32 - 200 mbar AG 30
- » SSV Ø 120 200 - 370 mbar AG 5
- » SSV Ø 90 0.15 - 4.2 bar AG 5

Minimal difference between regulator and SSV settings (ΔP_w):

- » 15% of set point with a minimum difference of 10 mbar to UPSO, 20 mbar to OPSO.

OUTLET PRESSURE RANGE

RB 1700

Spring Code	Spring Characteristic				Colour	Spring Range

20561122	2.5	15	35	7.25	7.25	-	-	1.08 - 2.70 bar

Relief Valve

The built-in relief valve is set 10 mbar above the outlet pressure setting. Other settings on request.

Spring characteristics:

d: wire diameter
De: external diameter
Di: internal diameter
Lo: height
Lt: no. of spires

FLOW CAPACITY

The following tables give the maximum flow capacity - in m³/h at standard conditions - of RB 1700 / RB 1800 regulators. More data are available in the leaflets "RB 1700 Capacity Tables" and "RB 1800 Capacity Tables".

Inlet Pressure	RB 1700		Inlet Pressure	RB 1720		Inlet Pressure	RB 1730	
	Outlet Pressure Setting			Outlet Pressure Setting			Outlet Pressure Setting	
	150 mbar	300 mbar		500 mbar	800 mbar		1500 mbar	2000 mbar
250 mbar	60	-	250 mbar	-	-	250 mbar	-	-
500 mbar	110	95	500 mbar	-	-	500 mbar	-	-
700 mbar	150	130	700 mbar	110	-	700 mbar	-	-
1 bar	190	180	1 bar	180	120	1 bar	-	-
1.5 bar	240	240	1.5 bar	240	240	1.5 bar	-	-
3 bar	300	320	3 bar	320	320	3 bar	220	-
5 bar	400	420	5 bar	420	460	5 bar	400	340
7 bar	460	500	7 bar	500	550	7 bar	650	650
8-16 bar	460	500	8-16 bar	500	550	8-16 bar	700	750

Inlet Pressure	RB 1810		Inlet Pressure	RB 1820		Inlet Pressure	RB 1830	
	Outlet Pressure Setting			Outlet Pressure Setting			Outlet Pressure Setting	
	20 mbar	50 mbar		300 mbar	500 mbar		1000 mbar	2500 mbar
100 mbar	200	160	400 mbar	240	-	1.4 bar	550	-
200 mbar	300	260	500 mbar	340	-	1.8 bar	800	-
400 mbar	420	420	600 mbar	420	240	2 bar	900	-
600 mbar	500	500	700 mbar	500	340	2.2 bar	1000	-
800 mbar	600	600	800 mbar	550	420	2.4 bar	1000	-
1 bar	700	700	1 bar	600	550	2.6 bar	1100	360
1.5 bar	850	850	1.5 bar	850	750	2.8 bar	1100	600
2 bar	1000	1000	2 bar	1000	950	3 bar	1100	800
3-16 bar	1100	1100	3-16 bar	1100	1100	4-16 bar	1100	1100

In order to limit the noise emission it is recommended not to exceed a gas velocity of 150 m/s at the regulator outlet.

FLOW CAPACITY

For a 0.6 specific gravity gas, the wide-open orifice flow (Q) may be calculated using the following equations:

- » Sub-critical flow behaviour: $Q = K_G \sqrt{P_d(P_u - P_d)}$ where $(P_u - P_d) \leq 0.5 P_u$
- » Critical flow behaviour: $Q = K_G P_u / 2$ where $(P_u - P_d) > 0.5 P_u$

Wide-open Flow Coefficient K_G

DN	RB 1700	RB 1800
K _G	250	700

The K_G flow coefficient is reduced by 5% when a SSV is built into the regulator.

Standard conditions:

- Absolute pressure of 1.013 bar
- Temperature of 15°C

Correction factor for non-natural gas applications:

The flow rates are indicated for a 0.6 specific gravity gas.

To determine the volumetric flow rate for gases other than natural gas, multiply or calculate the values in the capacity tables using the sizing equations with a correction factor.

The table below lists correction factors for some common gases:

Gas type	Specific gravity	Correction factor
Air	1.00	0.77
Butane	2.01	0.55
Carbon dioxide (dry)	1.52	0.63
Carbon monoxide (dry)	0.97	0.79
Natural gas	0.60	1.00
Nitrogen	0.97	0.79
Propane	1.53	0.63
Propane-Air mix	1.20	0.71

Specific gravity or relative density (air = 1, non-dimensional value)

Use the following formula to calculate the correction factor for gases not listed above. In the formula, d is the specific gravity of the gas.

$$\text{Correction factor} = \sqrt{\frac{0.6}{d}}$$

where:

- Q = volumetric flow rate in m³/h at standard conditions
- P_u = absolute inlet pressure in bar
- P_d = absolute outlet pressure in bar

Overall Dimensions

DN	Actuator	A	B	C	D	E	F	G	Weight (kg)	DN	A1
